

Project: Healthcare Data Analysis for Hospital Management

Using SQL and PowerBI

Objective: To analyze patient data, hospital resources, and treatment outcomes to improve operational efficiency and patient care.

Dataset Description:

Patients: PatientID, PatientName, Gender, Age, Address, ContactNumber

Admissions: AdmissionID, PatientID, AdmissionDate, DischargeDate, Department, DoctorID, Diagnosis

Treatments: TreatmentID, AdmissionID, TreatmentDate, TreatmentType, TreatmentCost

Doctors: DoctorID, DoctorName, Specialization, ContactNumber

Departments: DepartmentID, DepartmentName

Data Analysis Tools

SQL : For data extraction, transformation, and loading (ETL).

Power BI : For data visualization and reporting.

SQL QUERIES :

9 # Q1). Total Admissions by Month

```
10 • select year(AdmissionDate) as Year, month(AdmissionDate) as month, count(*) as totaladmissions
11 from admissions group by year(AdmissionDate), month(AdmissionDate)
12 order by year, month;
```

Result Grid |   Filter Rows: | Export:  | Wrap Cell Content: 

	Year	month	totaladmissions
▶	2022	7	21
	2022	8	112
	2022	9	117
	2022	10	129
	2022	11	120
	2022	12	117
	2023	1	146
	2023	2	111
	2023	3	130

```

14 # Q2). Average Length of Stay by Department
15 • select department, round(avg(datediff(AdmissionDate, DischargeDate)),2) as AvgLenofStay
16 from admissions
17 group by department
18 order by AvgLenofStay desc;

```

Result Grid |   Filter Rows: | Export:  | Wrap Cell Content: 

department	AvgLenofStay
Occupational therapist	-165.18
Catering manager	-171.15

Recommendations

1

Optimize resource allocation based on demand.

2

Improve patient care protocols to reduce costs and stay lengths.

3

Enhance training for doctors with lower success rates.

4

Expand outreach programs to underserved areas.

5

Continuously monitor and adjust strategies for efficiency and care quality.

Thank
You
